RE: Burner Booster

June 18, 2012

Dear Mr. LaVoie and your staff,

Our biggest thanks to you, and the Burner Booster; as it has exceeded all our expectations. The elimination of all odors from our large boiler room is a true testimonial all to itself on the clean burning of 28gph before and the 16gph which is equating to be saving a reduction of 70 gallons per day on the colder days with the Booster system. Our fuel saving to us is drastic, especially in this hard economy to show an average savings just north of 30%-WOW! The slightly quitter operation is a plus.

Our mill plant doesn't have ½ as bad steam controlled heat issues as before-Love to know how you did that!! I was so use to 2-3 complaints a day from burning our oil with the uneven heat and odors, that now I can now focus more of my duties managing my property and operations.

Again, thanks for the added effort and quick install. I'm totally gone from skeptic to now I'm offering you and your company space at my mill if you need to expand. If I learned anything, is that I should have put the Burner Booster in September and not waited, the mill would have saved sooner.

Sincerely

Richard J Bruno
