

To the management and Investors of;  
Energy Efficiency Solution

July 30th, 2014.

I wanted to take a brief moment to confirm that the Burner Booster system installed at our Biodiesel production facility has been nothing short of outstanding compared to our previous systems.

We had many problems with our past so called "*Special Burners*" sold to us claiming that they could burn by-products from our biodiesel manufacturing stream. Finally, we learned that only the Burner Booster could live up to those claims.

Our 2 1/2 year usage of The Burner Booster has been a great learning experience for both our companies, on the many different setting and configurations of different blended fuels. It has allowed Maine Standard Biofuels to invest and grow from the savings three fold, since we got the system.

The Reduction of clogging nozzles is a true testimonial all to itself. Now with The cleaner fire and more efficiency of our boiler, this has allowed us to increase capacity at the plant while still using less fuel than before. Our need not to burn our Bio-Diesel from inventory and burn our blended waste-bio steams, is an awesome event in money saving! I am talking savings of over \$60,000/year and reliability second to none.

Thanks Again to EES and our Burner Booster system! It has exceeded all of our expectations and helped reduce our heating costs significantly.

Sincerely,
