

WHITE MOUNTAIN OIL & PROPANE

Dear Eric,

White Mountain Oil could not have been more pleased with the performance and the savings after the first year at Deer Park Recreation center. As a result of their condition to hire us if we could save them on oil, was a winner for all.

The 5,600sq ft. Recreation Building had 2 very good performing Carlin 802CRD Burners, on Burnham boilers; showing a combustion analyzer efficiency reading of about 83%. Their records and ours, based on the previous year with heating degree days, has shown on the shoulder of the season to be about 15% fuel oil savings and then during the peak of the winter a solid 18-20% fuel oil savings. The system was installed back in September and since then; not one time out, lock out or safety-lock out. The Boiler room is a lot cooler too.

The recreation center management staff has mentioned several times to us that this was totally unusual not to have the heat go down. We have some other potential customers we would like to get the Burner Booster installed at this summer. It has been a real winner for growing our reputation and adding some new accounts.

Thanks again, hope you and your staff have a great season,

Sincerely,

Bob Morin
Service Manager
